Dear Hiring Manager,

We both have witnessed the drastic changes post pandemic; where digital commerce transactions have skyrocketed with more businesses strengthening their online presence AND more employees prefer to work remotely – undeniably due to comfort, but undoubtedly as safety precaution.

Therein I understand the need for a hiring manager to confidently hire a remote applicant that can work diligently with minimal supervising while also deliver excellent quality works that surpassed client's expectation.

I can't claim to be the best in the field, but;

- More than 10 years of experience as software test engineer, predominantly in manual testing for telco e-commerce project.
- Resourceful automation test engineer with good understanding of JAVA programming and experienced automating web and mobile application
- Trusted to lead a pack of skilled QA testers for critical projects.

If I managed to grab your attention, please find enclosed my resume where I listed all my relevant experience and contributions, and a separate document containing explanation on my automation testing experience in more details.

Should you like to schedule an interview, please reach me at my phone number (WhatsApp message is welcomed). Thank you for taking the time to review my application, I look forward to talking with you.

Sincerely,

Zamir Yusof
